

MVP: Daily Control Tracker

A single-sheet behavioural tracker designed for immediate use. It combines task tracking, habit tracking, and a daily score to create accountability. The system uses psychological triggers such as progress tracking, streaks, and loss visibility (time and money wasted) to influence behaviour. It is simple, fast to use, and optimised for high conversion at a low price point.

Premium: Personal Control System

A multi-sheet spreadsheet system that expands the MVP into a full behavioural control framework. It includes a central dashboard, loss tracking (time and money), future projections, decision-making automation, regret analysis, and behavioural analytics. The system is designed to actively influence user decisions and habits over time, offering deeper insights and stronger psychological engagement. Positioned as a high-value product with advanced functionality.
